

# Lick Run Greenway

The central element of MSD's Lick Run Project is the Lick Run Greenway that will convey stormwater and natural drainage to the Mill Creek.

The Greenway will be located in the Cincinnati neighborhood of South Fairmount from old Queen City Avenue to the Mill Creek between Queen City and Westwood avenues.

The Greenway includes a special wetland area and rain gardens at old Queen City Avenue, a mile-long urban waterway (constructed channel that mimics a creek) from the headwaters area near White Street to a pond area east of Harrison Avenue. To control flooding, an underground stormwater piping system will run beneath the Greenway from old Queen City Avenue to the outfall into the Mill Creek.

## 1 Western Gateway Zone

Includes a wetland forebay and bioinfiltration basins at old Queen City Avenue and a headwaters area east of White Street where the creek begins and flows east.

## 2 Narrow Channel Zone

Includes a narrow creek from Quebec Avenue to Grand Avenue.

## 3 Civic Recreation Space

Includes a wider, meandering creek from Grand Avenue to Harrison Avenue and improved recreational space.

## 4 Eastern Gateway Area

Includes a pond east of Harrison Ave. The pond overflows to an underground stormwater conveyance box that flows into the Mill Creek. The pond discharges to the Mill Creek through an outfall pipe.
